SCIP NUMBER FOR FINISHED PRODUCTS MADE OF LEAD-CONTAINING MATERIALS

According to Article 9(1)(i) of the European Waste Framework Directive 2008/98/EU (last amended by (EU) 2018/851), suppliers of articles that contain Substances of Very High Concern (SVHC) in concentrations above 0.1 % (w/w) have the obligation to notify these articles to the European Chemicals Agency ECHA using the SCIP database (Substances of Concern In articles as such or in complex objects (Products)). Finished products are considered as articles. The SVHC relevant for the finished products supplied by **COLOR METAL** is lead (Pb). The following list contains the SCIP numbers of the finished products notified by us. Please consider that we have grouped our finished products into product groups according to the rules for SCIP notification. In accordance with article 33 of the REACH-Regulation, we hereby inform you that the following copper-, aluminium- and steelbased alloy finished products contain a substance (LEAD) included in the REACH Candidate List (SVHC):

PRODUCT	MATERIAL DESIGNATION		Weight Percent LEAD (PB)	SCIP NUMBER
Oil level sight glass, brass	CW614N	CuZn39Pb3	2,50 - 3,50 %	baf63d19-e5f1-466a-88e8-b04a0a7816fc
Oil level sight glass, aluminium	EN-AW 2007	AlCuMgPb	0,80 - 1,50 %	74059ff9-24d3-4710-ba9c-e8833a1515e2
	EN-AW 2030	AlCu4PbMg	0,80 - 1,50 %	
	EN-AW 2011	AlCuBiPb	0,20 - 0,40 %	
Oil level sight glass, steel	F212	11SMnPb30	0,15 - 0,35 %	bded05cf-be89-4ee7-b9e0-2f6f9230bf70

Instructions for safe use

You should evaluate the risk, within your safety guidelines and protocols, to the health of workers and the potential impact to the environmental of dust containing lead being released while using and working with products containing lead. Provisions should be made to avoid exposure to workers during material operations such as cutting, drilling, grinding etc., by using lubricants, extraction, suction, removal, or sealed environments. You must ensure you follow the applicable lead concentration in the air at workplaces, dermal exposure and lead contamination of workwear health and safety regulations in your country or region. The disposal of lead containing residues and scrap must comply with corresponding laws.

You have an obligation to communicate the preceding information to any EU customers Non-essential, supplementary information.

REACH information is not based on recent scientific findings; nonferrous semis have been regulated for a number of years.

There is no practical alternative to using lead in copper alloys at the current time. Lead improves properties such as friction reduction and is a requirement for the machinability of the finished products.
